[HEADWORK CARTRIDGE](#)

[THERMOSTATIC CARTRIDGE](#)

The advantage of our products

The raw material selection

The main criteria in selecting the initial materials will be their fitness and their purity, which will contribute to the proper characteristics of the ceramic products.

Quality Control

The quality control data is prepared for all the various items, including Surface roughness, Flatness, Parallelism, Surface contact, Firing operation Pressing operations & Individual inspection etc.

Research & Development

To be world's premier in this field in the 21st century which satisfies the increasing and diverse desire of customers, we concentrate its R&D activities on the process development of high property products.

Future strategy

As a corporations aiming at worlds leading ceramic manufacturer in the 21st century, Shinhan Ceramics Co., Ltd. Will continue to pure high-quality management strategies through bold R&D investment for technological advancement and active globalization drive.

Shinhan Ceramic Co., Ltd. has declared the year 1999 as its first year of second phase for long-term development plan. Continuing its globalization drive, the company is actively participating in technological exchanges and joint ventures with benchmarked corporation in the world.

New Challenge from Innovation !

Shinhan Ceramic Company S.C.C. innovates itself to be a world top-class special material provider by challenge and innovation.

“Why Choose Shinhan as their Partner?”

Shinhan Ceramic has contributed all its effort to the development of inorganic materials industry since 1993. On the basis of the accumulated inorganic materials technology, knowledge and our advanced materials, Shinhan initiates Fine ceramics, High alumina and Metallized products for various industrial customers.

Shinhan Ceramic Co. Ltd. has been in existence for the short time but its achievements has been remarkable as we now possess high state of confidence in the field of industrial ceramic.

It is our desire to advance into the world's premier fine ceramic manufacturer by responding to the expectations of customers and the need of futures.

We believe that our future rests with making the best even better, and that includes our commitment to customer support and service.

We hope you feel that confident in expanding your future growth with our company and sincerely hope to serve you in the near future.

A detailed information on our company with special focus on this field business is given here for your evaluation.

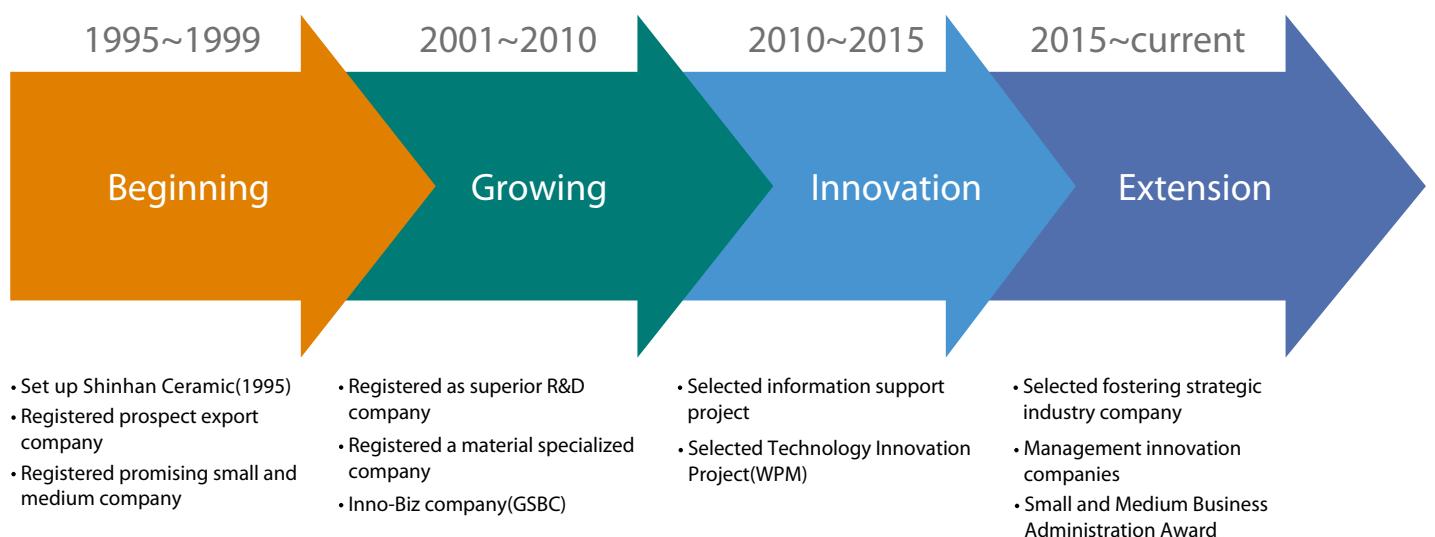

S.C.C. continuously endeavoring to be the best company by world class technology and transparent management.

S.C.C. concentrate Research & Development by continuous challenge mind and creative idea.

S.C.C. who's grown up as a global partner, will make their technology to be world standard as a leading company in ceramic and material provider.

Appreciate of your continuous support and encouragement to **S.C.C.**.

Company History

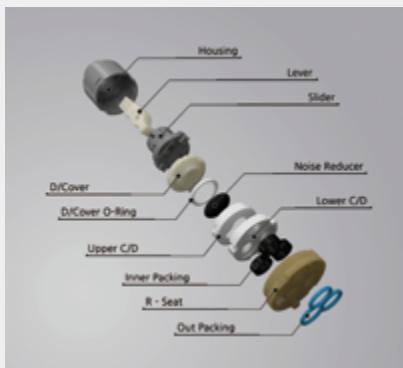

CERAMIC SEAL DISC

S.C.C ceramic discs work marvelously in the ceramic cartridge for sanitary fittings leaving no trouble more than 500,000 cycles use

S.C.C seal disc in oxide ceramics show no measurable wear when used on all kinds of lever and mixers with turning mechanism.

Ceramic disc for ceramic cartridge

Exact control and optimum sealing are ensured for 500,000 cycles operation periods due to the chemical inertness and great hardness of the ceramics.

Single lever mixer containing S.C.C seal disc allows maintenance-free in life time.

Ceramic disc for ceramic headwork

The excellent sliding properties of oxide ceramics are an assurance of trouble-free functioning and good durability

Twin lever mixer containing S.C.C seal disc shows no measurable wear in using 500,000 cycles.

The properties of ceramic seal disc

Density

Density plays an important role because it is related to the wear. The raw material refined by spray dryer is foamed by multiple foaming press.

Flatness

The permanent flatness and smoothness of the disc faces guarantee an excellent sealing performance.

A special characteristics of S.C.C Alumina(SP-96) sealing and control discs are pocket-shaped pores in the sealing faces, which act as lubricant reservoirs and guarantee an uniform lubricant film for easy operation.

Operation life

Test proved that even after 500,000 cycles use S.C.C® cartridge found no obstacle in normal function.

Flatness

S.C.C standard Flatness : F≤0.6um

ENGINEERING FINE CERAMIC

Alumina Ceramic are very valuable as electrical materials because of their insulating strength and small dielectric loss.

As industrial awareness of advanced materials increase, the number and variety of application areas of Engineering Fine Ceramic expands rapidly. Shinhan ceramic receives growing demand every year from various industrial fields because Engineering Fine Ceramics have such excellent properties as heat resistance, light weight, insulation and super hardness.

Main Products

- Ceramic tubes • Surge arrester tubes • Metallized products • Shaft & bearing for pump

Shinhan ceramic produces metallized components offering multiple alloy combinations.

Many types of ceramics are amendable to the additions of metallizing coatings.

Some ceramic bodies more readily accept additions than other. The 90~96% Alumina most readily accept any of the refractory metallizing process coatings.

Alumina ceramics are inert and therefore are highly resistant to chemical attack.

In addition, Ceramic is almost unaffected by water, solvents, salt solutions, and molten salt.

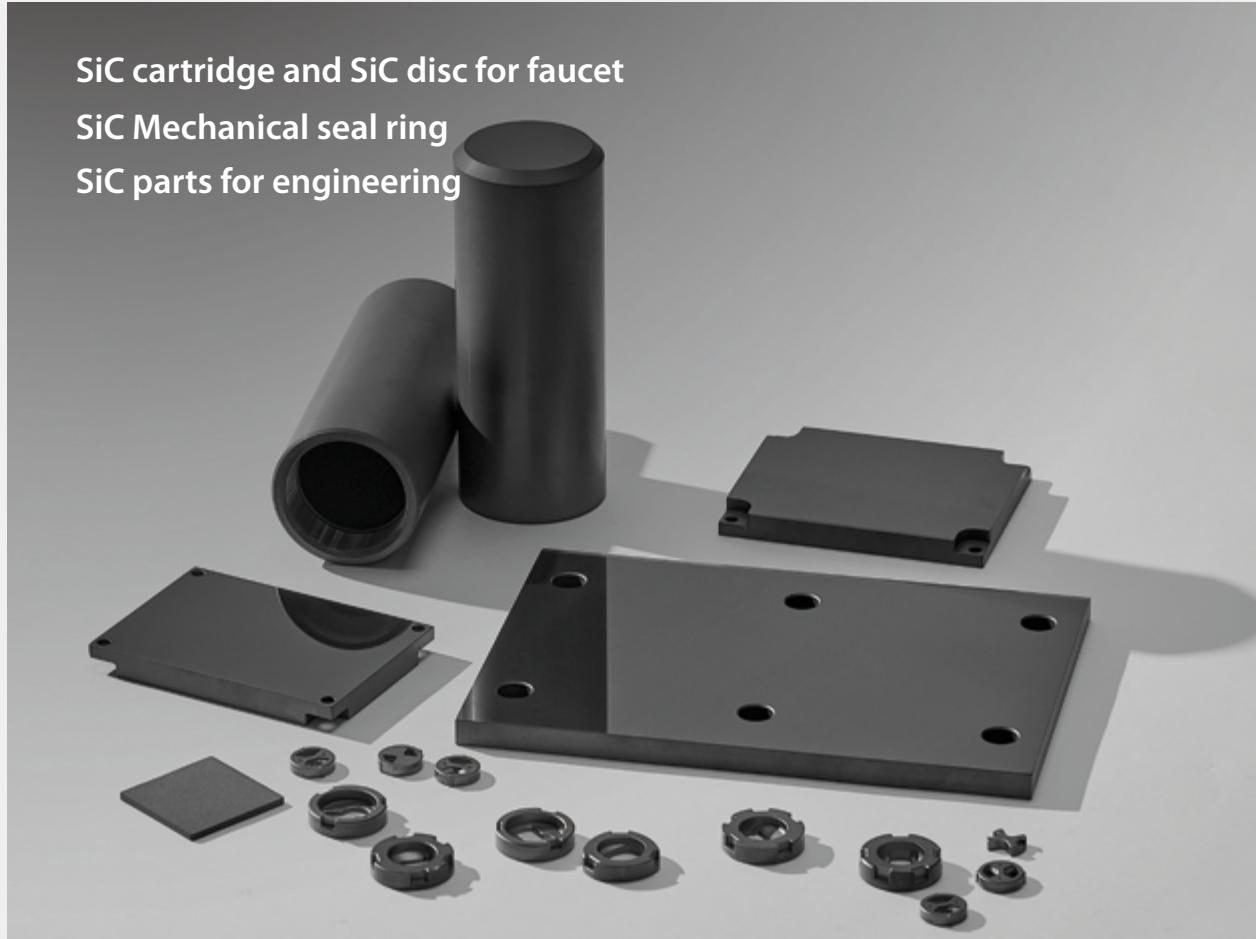

The corrosion resistance of high alumina ceramics is generally superior to most metals, plastics.

SILICON CARBIDE (SiC)

SiC cartridge and SiC disc for faucet

SiC Mechanical seal ring

SiC parts for engineering

Valve disc, Sliding bearing, Ball media, Armor plate, Heat sink

SiC ceramics are used for high quality which required of high hardness, high wear resistance, low coefficient of friction, high thermal conductivity, chemical resistance, high strength, etc. Its application is for automobiles, oil chemicals, environments, energies, electric-electronics, mechanics, national defenses, etc.

Property	Unit	Value
Density	g/cm ³	3.11~3.15
Purity	%	99.2
Hardness Hv(0.5)	kg/mm ²	2,450
Flexural Strength	MPa	440
Fracture Toughness	MPam ^{1/2}	3.6
Elastic Modulus	GPa	410
Thermal Expansion Coeff.	10 ⁻⁶ /°C	4.4
Thermal Conductivity	W/mK	115

CERAMIC CARTRIDGE

ECO CARTRIDGE(Energy Saving)

It discourages hot water use in favor of energy saving
It flows out only cold water in the middle of handle

WATER SAVING CARTRIDGE

3-STEP, 2-STEP

SiC CARTRIDGE

Silicon Carbide (SiC) improves the durability of cartridge and have self-lubricative

DLC (Diamond like carbone coated) CARTRIDGE

DLC Coating maintains low torque and inside water pressure endurance in the poor water quality environment

JOYSTICK CARTRIDGE

It applied basic design method of lever innovatively, so it can be adapted to various kinds of faucets

35mm Ceramic Cartridge

Dimensions (mm)

Max. Opening Angle	20°
Max. Turning Angle	90°
Nut Torque	10 ~ 11 Nm
Water Resistance Pressure	Max. 35bar
Working Torque	Max. 0.5 Nm
Max. Temperature	90°C
Flow Rate	(at 1bar) 7.5~8.5 ℓ/min
	(at 2bar) 11.0~12.0 ℓ/min
	(at 3bar) 14.0~15.0 ℓ/min
Endurance Test (EN-817)	
500,000 times	

SCC 38AF,A

38mm Ceramic Cartridge

Dimensions (mm)

Max. Opening Angle	25°
Max. Turning Angle	100°
Nut Torque	10 ~ 11 Nm
Water Resistance Pressure	Max. 35bar
Working Torque	Max. 0.5 Nm
Max. Temperature	90°C
Max. Noise Level	15 ~ 18db
Flow Rate	(at 1bar) 12~13 ℓ/min
	(at 2bar) 17~19 ℓ/min
	(at 3bar) 20~28 ℓ/min
Endurance Test	
500,000 times	

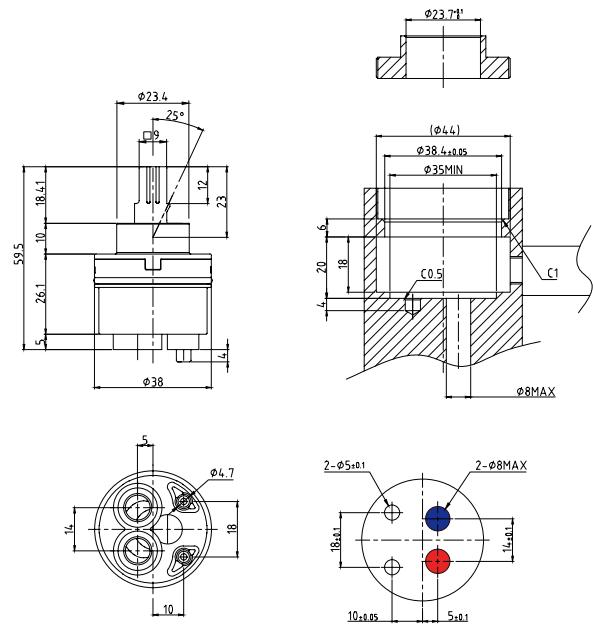

SCC 38AF, A-CO

THERMOSTATIC CARTRIDGE

BRASS THERMOSTATIC CARTRIDGE

PLASTIC THERMOSTATIC CARTRIDGE

SMA THERMOSTATIC CARTRIDGE

S.C.C THERMOSTATIC CARTRIDGE

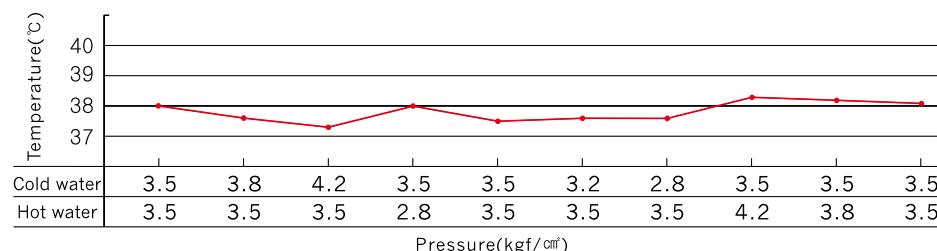

The S.C.C Thermostatic cartridge is assembled by the very delicate sensor and finely wrought brass parts, so only this one can react such tiny changes in temperature.

It is designed to improve our home life by using constant temperature of water in the change of water pressure. It can provide excellent service to you with high quality.

Technical Data

- Turning angle : 330°
- Temperature range : 20~50°C
- Temperature stop : 38°C or 40°C
- Inlet water supply temperature : Hot water 70°C, Cold water 15~25°C
- Outlet water temperature adjusted on 38°C±1.5°C
- Outlet flow rate adjusted on 38°C : 20ℓ/min at 3bar
- Operating pressure : 0.5~6 bar
- Recommend pressure : 1~5bar
- Life cycle : 100,000 cycle
